BUG REPORT

Bug id	DEF01
Summary	Product images are not displaying on the product page.
Detailed Description	When a user opens the Royal Cricket Store website and navigates to the products section, the product images are not displayed properly. The images may appear blank or as broken image placeholders, making it difficult for users to identify the cricket products they want to purchase.
Steps to reproduce	1. **Open the Royal** Cricket Store website. 2. Navigate to the Products section. 3. View the available cricket products. 4. Observe the product images. 5. Verify whether the images are displayed correctly.
Severity	Medium – Missing product images affect the shopping experience and make it difficult for customers to identify products.
Environment	● Operating System: Windows 11 ● Browser: Google Chrome ● Application: Royal Cricket Store ● Application Type: E-commerce website ● Testing Type: Manual Testing
Status	Fixed

Bug id	DEF02
Summary	Cancelled order still displays “Order Placed” and the total spending remains ₹840.
Detailed Description	When a user places an order on the Royal Cricket Store website and subsequently cancels it, the order status continues to display “Order Placed” instead of “Cancelled.” Additionally, the total spending still shows ₹840 after the cancellation. This may indicate that the order status and total spending are not being updated correctly after an order is cancelled.
Steps to reproduce	1. Open the Royal Cricket Store website. 2. Navigate to the products section. 3. Select a product and place an order. 4. Verify that the order is placed successfully. 5. Cancel the order. 6. Navigate to the order history section. 7. Observe the order status. 8. Check the total spending displayed on the website.
Severity	Medium – The incorrect order status and spending information may confuse users and reduce their trust in the application's order management system.
Environment	● Operating System: Windows 11 ● Browser: Google Chrome ● Application: Royal Cricket Store ● Application Type: E-commerce website ● Testing Type: Manual Testing
Status	Opened

Bug id	DEF03
Summary	Password reset token is displayed on the screen instead of being sent to the user's email.
Detailed Description	When a user requests a password reset on the Royal Cricket Store website, the application displays a development-mode message stating that no email service is configured. It also exposes the password reset token directly on the page and provides a link to continue resetting the password. This does not follow the expected password reset process for a production application and may create a security risk if sensitive reset tokens are exposed to unauthorized users.
Steps to reproduce	1. Open the Royal Cricket Store website. 2. Navigate to the Forgot Password page. 3. Enter a registered email address. 4. Click the Send Reset Link button. 5. Observe the message displayed on the page. 6. Check whether the password reset token is displayed directly on the screen instead of being sent by email.
Severity	**High** – Exposing password reset tokens in a production environment may allow unauthorized password resets. The severity depends on the application's deployment and security controls.
Environment	● **Operating System:** Windows 11 ● **Browser:** Google Chrome ● **Application:** Royal Cricket Store ● **Application Type:** E-commerce website ● **Testing Type:** Manual Testing ● **Mode:** Development Mode
