Test_Case __Wbt_006

Field	Description
Taste Case ID	TC_Wbt_006
Title	Verify Add to Cart functionality
Description	Verify that the `add_to_cart()` function executes successfully and stores the selected product in the user's cart collection in the database.
Preconditions	1. Flask server is running. 2. MongoDB Atlas is connected. 3. User is logged into the application. 4. Product is available in the database. 5. Cart module is accessible.
Test Steps	1. Login to the application. 2. Navigate to the Products page. 3. Select a product (Cricket Bat). 4. Click the **Add to Cart** button. 5. Verify the execution of the `add_to_cart()` function. 6. Check whether the product is stored in the cart collection.
Test Data	Product: Cricket Bat Quantity: 1
Expected Result	The selected product should be added successfully to the user's cart and stored in the MongoDB database.
Actual Result	Product was added successfully to the cart and stored in the database.
Status	Pass
Postconditions	The cart is updated with the selected product, and the user can view the item in the Cart page.

Test_Case_007

Field	Description
Taste Case ID	TC_Wbt_007
Title	Verify Total Price Calculation
Descriptions	Verify that the `calculate_total()` function correctly iterates through all items in the cart and calculates the total amount.
Preconditions	1. Flask server is running. 2. MongoDB Atlas is connected. 3. User is logged into the application. 4. The cart contains multiple products. 5. Cart page is accessible.
Test Steps	1. Login to the application. 2. Navigate to the Cart page. 3. Ensure the cart contains multiple products. 4. Execute the `calculate_total()` function. 5. Verify that the loop processes each cart item. 6. Check whether the total amount displayed matches the sum of all product prices.
Test Data	Product 1: Cricket Bat – ₹1500 Product 2: Cricket Ball – ₹300 Product 3: Batting Gloves – ₹700
Expected Result	The system should correctly iterate through all cart items and display the total amount as **₹2500**.
Actual Result	The loop executed successfully, and the total amount **₹2500** was calculated and displayed correctly.
Status	Pass
Postconditions	The cart total is updated successfully, allowing the user to proceed with the checkout process..

TC_008

Field	Description
Taste Case ID	TC_Wbt_008
Title	Verify successful order creation
Description	Verify that the `create_order()` function executes successfully, stores the order details in the MongoDB database, and clears the user's cart after a successful order placement.
Preconditions	1. Flask server is running. 2. MongoDB Atlas is connected. 3. User is logged into the application. 4. The cart contains one or more products. 5. Checkout page is accessible.
Test Steps	1. Login to the application. 2. Add products to the cart. 3. Navigate to the Checkout page. 4. Click the **Place Order** button. 5. Execute the `create_order()` function. 6. Verify that the order is stored in MongoDB and the cart is cleared.
Test Data	Products: Cricket Bat, Cricket Ball Total Amount: ₹1800
Expected Result	The order should be created successfully, stored in the database, and the cart should be cleared after order placement.
Actual Result	Order was created successfully, stored in MongoDB, and the cart was cleared.
Status	Pass
Postconditions	A new order record is created in the database, the user's cart becomes empty, and the order appears in the Order History section.

TC_009

Field	Description
Taste Case ID	TC_Wbt_009
Title	Verify order creation with an empty cart
Description	Verify that the `create_order()` function executes the **false branch** when the cart is empty and prevents order creation.
Preconditions	1. Flask server is running. 2. MongoDB Atlas is connected. 3. User is logged into the application. 4. The shopping cart is empty. 5. Checkout page is accessible.
Test Steps	1. Login to the application. 2. Ensure that no products are added to the cart. 3. Navigate to the Checkout page. 4. Click the **Place Order** button. 5. Execute the `create_order()` function. 6. Verify the validation logic for an empty cart.
Test Data	Cart: Empty
Expected Result	The system should not create an order and should display the message **"Cart is Empty"**.
Actual Result	Order creation was prevented, and the message **"Cart is Empty"** was displayed successfully.
Status	Pass
Postconditions	No order record is created in the database, the cart remains empty, and the user stays on the checkout page.

TC_0010

Field	Description
Taste Case ID	TC_Wbt_0010
Title	Verify successful profile update
Description	Verify that the `update_profile()` function executes successfully and updates the user's profile information in the MongoDB database.
Preconditions	1. Flask server is running. 2. MongoDB Atlas is connected. 3. User is logged into the application. 4. Profile page is accessible. 5. User profile already exists in the database.
Test Steps	1. Login to the application. 2. Navigate to the Profile page. 3. Click the **Edit Profile** button. 4. Update the user's name and email address. 5. Click the **Save** button. 6. Execute the `update_profile()` function. 7. Verify that the updated information is stored in MongoDB.
Test Data	Name: Avishkar Gorad Email: test_user@example.com
Expected Result	The updated profile information should be successfully saved in the MongoDB database and displayed on the Profile page.
Actual Result	Profile information was updated successfully and reflected correctly on the Profile page.
Status	Pass
Postconditions	User's profile information is permanently updated in the database and the latest details are displayed whenever the profile is accessed.
